Project Title

TagIt!

Team Name

Deco May Cry

Github URL

[Jack-710/DECO3500_Electronic-graffiti-system](https://github.com/Jack-710/DECO3500_Electronic-graffiti-system)

Team Members

Yihan Peng (Shino Peng)

Program of Study

Master of Information Technology

Email Address

yihan.peng@student.uq.edu.au

Statement of Aims

I hope to use this project as an opportunity to strengthen my skills in coding, UI design, project collaboration, and gamification. I am particularly interested in exploring directions related to games or game-like interactions, contributing to both design and technical implementation. This project is also a chance for me to prepare work that can support my future academic aspirations in game design. At the same time, I would like to improve in areas where I currently feel less confident, such as user research and methods that are common in design-oriented approaches.

Duties

Primary responsibility in interface and product design, focusing on shaping the overall user experience of the digital graffiti system.

Supporting the team in coding tasks and prototype implementation when needed.

Will collaborate closely with team members working on technical development to ensure design and implementation are well aligned..

Haoran Liang (Preferred name: Eden Liang)

Program of Study

Master of Information Technology

Email Address

Haoran.liang1@uq.edu.au

Statement of Aims

I consider my strengths to be in team documentation and literature research, as I have prior experience working on group documents for various DECO courses. I am also highly responsible and committed to supporting the team. On the other hand, my weaknesses lie in programming, where I currently have limited skills, and in time management, which I am working to improve. Nevertheless, I am willing to put in my best effort to contribute to the programming tasks assigned to me. Through this project, I hope to gain more hands-on experience in collaborating within a team and further develop my ability to participate effectively in group projects.

Duties

Within the team, I will primarily focus on team documental tasks. While I see myself taking on a supportive role within the team, I am also willing to assume the role of communicator if necessary to ensure smooth collaboration and progress.

Hok Leung Lee (Henry)

Program of Study

Bachelor of Science

Email Address

s4720410@uq.edu.au

Statement of Aims

My strength is to finish the task efficiently, while my weakness is to express my opinion. My aim is to experience the process of app designing.

Duties

My duty is to design the code of the backend of the prototype.

Yuhang Wu

Program of Study

Master of Computer Science

Email Address

s4928981@uq.edu.au

Statement of Aims

I'm usually the voice that cheers others on to embrace the next big thing, and I truly love brainstorming what might come next. The flip side is that once the spark of the nascent idea dims, I tend to drop the thread. Rather than side-stepping that reality, I'm using this project to strengthen my follow-through. I'm tracking not just time on task but tracking time between shifts and implementing tiny blockers that give the brain as much incentive to finish as it gets to begin. I also want to keep the team and myself filled with ongoing creative tension—creative tension is my term for the deal we strike between vision and the nitty providers of that vision—the creative left and the order hungry right, dialing both back onto the same threaded task. I hope the combination of these low-threshold rituals will produce sturdier ideas, both mine and the teams.

Duties

Frontend Developer

Chen Li

Program of Study

Master of Information Technology

Email Address

s4635282@uq.edu.au

Statement of Aims

Through this project, I want to take the opportunity to reflect on both my strengths and my weaknesses. I know that I am usually good at listening carefully to others and following through with tasks, which helps me work well in a team. At the same time, I sometimes find it difficult to express my own ideas confidently, and I also recognize that I lack experience in certain technical areas, especially back-end development.

Duties

My core responsibility is to integrate team tasks and ensure everyone's work goals and progress are aligned. I coordinate the division of labor, monitor task completion, and promptly communicate and resolve any issues. I'm also responsible for summarizing and reporting on the team's achievements to ensure the overall project stays on track.

Communication Agreement

Primary channel of communication & secondaries

Our primary channel would be WeChat.

The secondary would be Discord.

Expectation of response times

Our response times are expected to be 24 hours.

Meetings & meeting management

We would like to have a meeting after each studio on Tuesday.

The meeting would be about 1 hour.

How decisions will be made within and about the project

When we make decisions, we prefer to vote to decide.

Where and when your team/group will meet and how you will communicate

Everyone will attend the meeting in the Central Library in person, and the time has already been mentioned above.

Workload agreement

Task Management & Delegation

The team will assign tasks during weekly meetings according to the project stage, ensuring that all members contribute to research, design, prototyping, and documentation.

Tasks will be distributed based on members' interests and learning goals rather than solely on existing strengths.

All tasks will be logged as GitHub Issues with an assigned owner and due date to make responsibilities transparent.

Re-delegation of Workload

If a member is unable to complete a task on time, they must notify the team in advance. Tasks will then be reallocated to maintain project progress.

Redistribution will aim to keep workloads balanced so that no member is consistently overloaded or under-utilized.

GitHub Usage

We will use GitHub Projects/Issues to track tasks and progress, ensuring transparency and accountability.

Members are expected to update the status of their tasks in GitHub (e.g., closing issues, pushing commits) once work is completed.

Important files (code, prototypes, documentation) will be stored in the repository to avoid data loss.

Code contributions will be managed via branches and reviewed before merging.

Workload Balance

Each member will take primary responsibility for certain aspects of the project (e.g., user research, design, prototyping, documentation), based on their interests and strengths.

While members will have main areas of responsibility, we will also support each other when needed to ensure project progress.

All members are expected to contribute to the prototype in some way, though the depth of involvement may vary depending on role (e.g., coding, interface design, testing, or documentation of the prototype).

Tasks will be documented and tracked in GitHub, so contributions are transparent and can be adjusted if imbalances occur.

Conflict Resolution Agreement

What conflict means

Conflict refers to situations such as repeated lack of response to communications, failure to deliver tasks on time, or disagreements that cannot be resolved during regular discussion.

The process for raising issues within the team

Team members are expected to raise concerns as early as possible, ideally in the next team meeting. Issues can also be raised directly with the project manager if urgent.

What action will be taken in the case of conflict

Tasks may be redistributed by the project manager to ensure progress.

Workload will be adjusted fairly if a member takes on additional or fewer responsibilities.

If issues persist and cannot be resolved within the team, the matter will be escalated to the course teaching staff for mediation.
